

### **REGISTER TY-F25 Flexo Mount**

Ensures plates are properly mounted before they go to Press.

On Multi color jobs. We all know how essential it is for all of the plates to be mounted identically. Our product features two cameras, each focused on a different edge of the printing plate. The captured images are then aligned on two monitors. Thus, the operator can manipulate controls to bring the plate into perfect registration prior to full contact with the cylinder.

You will no longer have any problems with:

- Registration by eye.
- Long set up times,
- plate fixes and
- Scrap on press.

Your only problem may arise from persuading operations who are also used to doing it by hand and knife, (the olden way).

Standard system Features:

- 2 high- definition CCD video cameras, with high optical magnification
- 1 set of two 7" TFT LCD register screens (viewing monitor)
- 1 set of two illuminating lights to facilitate error free registration positioning
- Compatible for mounting Flexo plates for all rotary Flexo Presses
- Standard machine can handle cylinder widths ranging from 7"-25"
